

Quarterly Performance Report Generation – Client Reporting Procedure

Sample enterprise SOP for workflow-extraction testing

1. Purpose and Scope

This procedure describes the preparation of quarterly portfolio performance reports for client distribution. It covers the retrieval and validation of performance data, benchmark comparison, controlled disclosure language, narrative commentary, report assembly and portfolio manager approval.

2. Reporting Period and Data Sources

At the close of each reporting quarter, the reporting team establishes the applicable reporting period and identifies the approved data sources. Portfolio returns are obtained from the custodian or designated performance system. Benchmark information is retrieved for the same period and checked against the benchmark applicable to the portfolio.

3. Data Availability Check

The reporting analyst checks that the required portfolio and benchmark information is available. Missing or inconsistent records are investigated using the established data-quality process. The report is not finalized using an unverified value merely because a deadline is approaching.

4. Performance Calculation

Portfolio performance is calculated using the firm's established reporting methodology. The resulting return is compared with the applicable benchmark return for the same period. Where additional standard metrics are required by the reporting template, they are calculated using the approved methodology and stored with the reporting data.

5. Data Review

The calculated figures are reviewed for unexpected changes, missing values or inconsistencies with the source data. Any issue identified during this review is resolved before the figures are incorporated into the final client report. The purpose of this review is to ensure that the numerical information presented to the client is traceable to the approved source.

6. Controlled Disclosure Language

Quarterly reports contain standard risk disclosures and other approved boilerplate language. The reporting team retrieves the current controlled version of the relevant template or disclosure library. The approved wording is inserted into the appropriate sections without discretionary rewriting, because changes to controlled disclosure language may require a separate review and approval process.

7. Portfolio Activity Review

The reporting analyst or portfolio manager reviews material portfolio activity during the quarter. Relevant purchases, sales, allocation changes and other events are considered together with significant market developments that affected portfolio results. The purpose is to identify the factors that are genuinely useful for explaining the quarter to the client.

8. Narrative Performance Commentary

A written narrative is prepared to explain the principal drivers of performance in plain language. The commentary may need to connect several sources of information, distinguish material drivers from incidental events and present the explanation in a manner appropriate for the client. The reviewer checks that the narrative is consistent with the reported figures and portfolio activity.

9. Report Assembly

The report combines the calculated performance figures, benchmark comparison, approved disclosure language and narrative commentary. The reporting process places each component into the appropriate section of the standard client-facing template. Formatting checks are performed before the document is converted to its final PDF form.

10. Quality Review

The completed report is reviewed for numerical consistency, correct benchmark information, completeness of disclosures and consistency between the narrative and the underlying portfolio activity. Errors identified during the review are corrected before the report proceeds to final approval.

11. Portfolio Manager Sign-Off

The final report is submitted to the portfolio manager for review and sign-off. The manager considers the overall presentation, performance commentary and material client-facing statements. If changes are requested, the report is returned to the reporting team for revision and another review cycle.

12. Distribution and Record

After approval, the report is released through the established client distribution process. The approved version is retained with the relevant reporting records. The reporting team maintains the source information and final report so that the client-facing figures and commentary can be traced to the reporting period and underlying evidence.
